DETAILED ACTION

Receipt of applicants' remarks submitted August 14, 2002 is acknowledged.

Claims Rejections 35 U.S.C. - 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 5 -7, 10, 11 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tocker (WO 91/10362 of record) in view of Burger et al. (Derwent Abstract, Derwent – ACC-No. 1993-067839 of record) and Kogler et al. (US Patent 4,772,490) for reasons set forth in the prior office action.

Response to the Arguments

Applicants' arguments submitted August 7, 2002 have been fully considered, but are not persuasive for reasons discussed below.

2. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). In the instant case, the primary reference (Tocker) teach that employment of polyurethane as coating on agrochemicals granules for control releasing is known, the second references teach the particular method of coating herein is known in the art for many advantages in controlled releasing. Thus, it is prima facie

Art Unit: 1617

obvious for one of ordinary skill in the art, to use the particular method herein for its advantage.

Note, the ultimate functions of the coating in the references are the same, i.e., controlled release of active ingredients in the same environments.

3. Further, the claimed invention is not patentably distinct from the prior art in that the core may contain any other ingredients, including polyol, besides the active ingredients and solid carrier. See the claims herein.

4. Regarding claims 5, 7, 10,11 and 13, which recited water absorption ratio of the polyurethane, is not more than 5%, it is noted that the claims are with an additional functional limitation. Applicants simply asserted that the cited references do not teaches expressly the functional limitation herein, fails to address the examiner's arguments: " the polyurethane coating of Tocker is reasonably expected to have the same water absorption ratio as claimed herein," or "the optimization the properties of the coating accordingly by using different isocyanate or polyol is considered within the skill of artisan, as discussed by Tocker et al. (cross link degree) and Kolger et al. (different polyol and isocyanate)." Particularly, applicants fail to explain why the coatings in the references do have the water absorption greater than 5%, or the criticality of this functional limitation.

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period

Art Unit: 1617

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
